

TECHNICAL DATA SHEET

1. TRADE NAME: GLUE BOARD SPIDER 40 544 X 310 MM

Monitoring device (glue board) to be used inside U.V. lamps to detect the presence of flying insects like flies, midges, wasps, bugs, noctuids, moths, anobiidi, etc.

Monitoring device for the IPM application complying with UNI EN 16636:2015 Regulation, that must be applied to control regularly the pests' presence in a specific place for a defined time.

2. PRODUCT CODE: P-SH06061GC (yellow); P-SH06061NC (black)

3. PICTURE:

4. TECHNICAL SPECIFICATIONS:

The glue board Spider 40 is a monitoring device consisting in a glue trap.

It is composed of:

- Two colours printed cardboard: yellow or black base with black or white grid with numbers and letters. Plasticized only on the front side;
- Single adhesive side. Its adhesive capacity is ensured for at least 60 days, despite its exposition to U.V. rays, thanks to the specific characteristics of the raw materials used for producing the glue;
- Hot melt adhesive;
- Silicon release paper printed in black, with the instructions for its detachment;
- Flow pack for the boards wrapping.

Trap size:

- **Length:** 544 mm
- **Width:** 310 mm

Glue Area: 460 x 270 mm

Colour: As in the picture

InPEST products could undergo necessary or opportune technical changes, at any given time, without prior written notice to customers.

TECHNICAL DATA SHEET

5. HOW TO USE:

Place Spider 40 glue boards in the following places:

- Inside the proper U.V. lamp;
- Inside food industries, storehouses, kitchens, restaurants, pubs, and all those places where food is processed and stocked, or where the presence of flying insects is not appreciated;
- Near doors and windows, in order to stop the entrance of flying insects. The boards should not be visible from the outside, to avoid a recall for insects from the outside;
- At a maximum of 2 mts height;
- On the wall;
- The glued board allows the insects catch without fragmentation, avoiding the contamination risk of the processed product.

We suggest you to give a number to each trap and indicate its placement in the monitored area plan, in order to facilitate the check during the periodic monitoring.

Suggested monitoring period: all the yearlong.

Suggested frequency of the controls: Once a week in spring/ summer, once every 15 days in autumn/ winter. Change the glue board after two months (at the latest) or before according to the pest infestation or the presence of dust, water and/or damp in the environment.

The use of the glue board in a moist and/or dusty place could reduce the product functionality in the course of time.

Storage conditions: in a cool and dry room, temperature below 25°C and R.H. below 55%.
If well stored (intact packaging), the product shelf life is 3 years.

6. PACKAGING AND SPARE PARTS:

- Shrink pack of 6 pieces.
- Case of 25 packs (150 pcs).

7. DISPOSAL CONSIDERATIONS:

Waste disposal should be in accordance with existing Community, National and local regulations.
